- Does the hand-in contain a presentation or report, and the code needed to reproduce the findings?
  - Yes, the hand-in contains a presentation & all the code needed to reproduce the findings.
- Has data been properly investigated and handled?
  - The data was thoroughly investigated by plotting features of various interpretations of the data. However, not much has been done to the data - it would've been interesting to see how the plots could've been of use in e.g. preprocessing or tuning of the model(s) .
- Has a reasonable selection of features been done, and motivated?
  - No. Features were investigated thoroughly but this 'data' was never used. All features were used in all the models presented in the report.
- Has a reasonable choice of modeling method(s) been done?
  - Yes, the models chosen were reasonable and clearly motivated in the report.
- Are choices of parameters described and motivated?
  - No. Parameters are never covered in the report. In the code, parameters for the DecisionTree model are obtained from a manual grid-search.
- Has the performance of each method been properly evaluated?
  - Yes, the performance of each method has been properly evaluated by calculating the mean accuracy score over a number of iterations and plotting it.
